The Frames Families
Each shape is cut to hold a different range of prescriptions well — steeper curves suit stronger lenses, flatter ones suit milder corrections.
ACETATE
Halden
A round profile in layered acetate, built with a slightly deeper lens well for stronger prescriptions. Warm tortoise or ink colourways.
Best for prescriptions above ±4.00
TITANIUM
Corwin
A rectangular titanium frame, near-weightless on the bridge. The flatter lens face suits mild-to-moderate corrections and larger pupillary distances.
Best for prescriptions below ±3.00
COMBINATION
Isla
A browline shape, metal below and acetate above, for wearers who switch between reading and distance correction through the day.
Best for progressive and bifocal lenses

"We stopped asking people to pick a frame off a wall and then hope the lens fit it. We measure the eye first — the frame is just what holds the answer."
